Print this page at **100% / Actual Size**. Place a ring you own over the circles and match its *inner* edge. Check the 50 mm scale bar afterwards — if it is not exactly 50 mm, your printer rescaled the page.

Notes by market

US / Canada uses a numeric scale with half sizes. **UK / Australia** uses letters (H–Z). **EU** is the inner circumference in millimetres (ISO 8653), so it is the safest anchor when a supplier quotes a number without naming the system. **Japan** numbers run close to the EU circumference minus about 40. Whenever a quote gives only a number, confirm whether it is a diameter or a circumference — that single ambiguity causes more sizing errors than any other factor. For plain rings, also allow about half a size larger for a band wider than 6 mm.
